NASH JAVELONA

AI AUTOMATION | TECHNICAL VIRTUAL ASSISTANT | N8N & PYTHON

Philippines | citepointsearch@gmail.com | +63 936 928 6400 | Portfolio: nashjavelona.github.io

PROFESSIONAL SUMMARY

Entry-level AI automation and technical virtual assistant candidate with hands-on project experience in n8n, JavaScript, Python, Flask, webhooks, and APIs. Tested a local lead-processing workflow that validates inquiries, routes accepted and rejected submissions, and writes valid records to Google Sheets. Skilled in practical workflow documentation, troubleshooting, and AI-assisted development.

TECHNICAL SKILLS

Automation & integration: n8n, webhooks, REST APIs, HTTP requests/responses, JSON, Google Sheets OAuth, conditional routing, lead validation
Development & data: Python, JavaScript, Flask, HTML/CSS, SQLite, task scheduling, debugging, responsive dashboards
AI & messaging: Gemini API, Meta Graph API, Ollama/local LLMs, prompt design, customer-message workflows

SELECTED AUTOMATION PROJECTS

GlowFlow AI - Lead Processing & Consultation Funnel | n8n, JavaScript, Google Sheets, HTML/CSS

- Built and tested a local production-webhook workflow for input validation, priority classification, IF routing, and automatic Google Sheets row creation for accepted leads.
- Verified HTTP 200 acceptance and HTTP 400 rejection with sample requests; separately built a three-step consultation form and browser-only CRM dashboard demo (not yet linked to n8n).

ROSE AI - Messenger Automation Workflow | n8n, JavaScript, Gemini API, Meta Graph API

- Configured webhook-driven Messenger event handling, message buffering and debounce logic, AI request preparation, and an outbound messaging API step.
- Designed response instructions for pricing uncertainty, customer questions, image flags, complaints, and human escalation; end-to-end live verification pending.

TimeLens World - Social Content Operations | Python, Flask, API integrations

- Developed a content operations prototype with queue processing, scheduling, publishing-oriented integration components, and a Flask monitoring interface.
- Structured dashboard views for workflow controls, activity, integrations, analytics, and system status; public production deployment not claimed.

JARVIS Local v3 - Personal AI Assistant | Python, Flask, SQLite, Ollama

- Developed a local assistant project for contextual task routing, schedule prioritization, persistent SQLite context, voice features, and local-model access.
- Included Python tests covering scheduling logic, persistence, intent routing, and fallback behavior.

RELATED CREATIVE EXPERIENCE

Freelance Video Editor (2023-present) | AI Advertisement Creator (2025-present)

Produced social media videos and AI-assisted ad concepts, combining script planning, prompt design, editing, sound, and visual storytelling.

EDUCATION

Information Technology - Undergraduate Coursework
